

EASYCART – TEST REPORT

1. Project Information

Field	Details
Application	EasyCart
Application Type	E-Commerce Web Application
Testing Type	Functional & UI Testing
Testing Approach	Manual Testing
Tested By	Keerthana S
Test Environment	Web Application
Browser	Google Chrome, safari
Test Status	Completed
Modules Covered	7
Test Cases Covered	91

2. Testing Objective

The main objective of testing the EasyCart application is to verify that the major e-commerce functionalities work as expected requirements and that users can successfully browse products, search for products, manage the cart, place orders, and make payments.

The testing focuses on:

- Verifying functional requirements.
- Identifying defects in the application.
- Validating positive and negative scenarios.
- Checking user interactions, navigation, product, cart and checkout
- Ensuring correct order and payment processing.
- Verifying that invalid inputs are handled appropriately.

- Ensuring a smooth end-to-end shopping experience.

3. Testing Scope

The following EasyCart modules are covered in this test:

S.No.	Module
1	Registration
2	Login
3	Home Page
4	Search
5	Product Details
6	Shopping Cart
7	Checkout

4. Test Environment

Environment	Details
Application	EasyCart E-commerce website
Testing type	Manual Testing
Operating System	Mac
Browser	Google Chrome, Safari
Browser Version	Latest stable version
Testing Device	Laptop
Database	My SQL
Network	Stable Internet Connection

5. Modules Tested

1. Login

- Verify login using valid credentials.
- Verify login after successful registration.
- Verify incorrect password handling.
- Verify unregistered email handling.
- Verify login validation and session behaviour.

2. Registration

- Verify user registration with valid details.
- Verify required-field validation.
- Verify invalid email format handling.
- Verify duplicate/registered email handling.
- Verify valid password and successful registration.

3. Home Page

- Verify Home Page loading.
- Verify EasyCart logo and navigation links.
- Verify products are displayed correctly.
- Verify product selection from Home Page.
- Verify broken navigation-link behaviour.

4. Product Search

- Verify search for existing products.
- Verify partial and case-insensitive search behaviour.
- Verify search result accuracy.
- Verify no-result and invalid-search scenarios.
- Verify empty search input handling.

5. Product Details

- Verify product details page display.
- Verify product price, image, description, and availability.
- Verify Add to Cart functionality.
- Verify invalid quantity and unavailable-product handling.

6. Add to cart

- Verify adding one and multiple products to Cart.
- Verify product information in Cart.
- Verify quantity increase and total calculation.
- Verify product removal and cart total update.
- Verify duplicate and zero-quantity handling.

7. Checkout

- Verify Checkout page and product details.
- Verify valid delivery address entry.
- Verify order total calculation.
- Verify required-field validation.
- Verify invalid phone number and empty-cart behaviour.

5. Testing types covered

Testing Type	Coverage
Functional Testing	Yes
Positive Testing	Yes
Negative Testing	Yes
UI Testing	Yes
Integration Testing	Basic coverage
Usability Testing	Basic coverage
Compatibility Testing	Basic coverage

Performance Testing	Not included in current scope
Security Testing	Not included in current scope

6. Test Data

The following types of test data are used:

- Valid registration details
- Invalid registration and login details
- Valid and invalid email/password combinations
- Valid and invalid search terms
- Available and unavailable products
- Valid Wishlist and Cart product data
- Valid and invalid delivery details
- Valid and invalid payment details
- Positive and negative checkout data
- Existing and non-existing products
- Valid and invalid phone numbers
- Test data for cart totals.

7. Entry Criteria

Testing can begin when:

- Application can be accessible.
- Required test data should be available.
- Test environment should be ready.
- Test cases are prepared and reviewed.
- Major application functionalities are available for testing.

8. Exit Criteria

Testing can be considered complete when:

- All planned test cases have been executed.
- Critical functionalities have been verified.
- Identified defects have been documented.
- Retesting and regression testing are completed.
- Final test results are recorded.

9. Defect Reporting

Defects identified during testing should be reported with:

- Defect ID
- Module
- Defect Summary / Title
- Description and Steps to Reproduce
- Expected Result
- Actual Result
- Severity
- Priority
- Screenshot/Attachment
- Defect Status

10. Risks & Assumptions

Risks:

- Network interruptions may affect testing.
- Search results may change when product data changes.
- Browser or environment differences may affect UI behaviour.

- **Assumptions:**

- Test environment is available.
- Required test data is valid.
- The EasyCart application remains accessible during testing.
- Internet connection is stable.

11.Conclusion

The EasyCart application was tested for major e-commerce functionalities including Registration, Login, Home Page, Search, Product Listing, Product List / Details, Shopping Cart and Checkout

Test cases are designed to validate both positive and negative scenarios and to identify functional issues that may affect the shopping experience.

Overall, the purpose of this test report is to document the EasyCart functional test coverage, test data, entry and exit criteria, defect-reporting approach, risks&assumptions, and completion criteria.
